CANADA - METEOROLOGICAL BRANCH - DEPARTMENT OF TRANSPORT

MONTHLY WEATHER MAP

NOVEMBER 1960

General Summary of Weather Conditions

November temperatures were generally below normal throughout the central portions of Canada including the Northwest Territories and the Prairie Provinces of Alberta and Saskatchewan. The warmest part of Canada relative to normal was northern Ontario and the adjacent parts of Quebec, although mean temperatures were above normal throughout the eastern districts as well as in the southern part of Manitoba. Precipitation was generally somewhat below normal, for the country as a whole, particularly in the Prairie Provinces and the interior sections of British Columbia.

The general circulation aloft for the month was characterized by a strong upper westerly flow which brought colder air into the central and northern sections of the country. In the latter part of the month blocking in the Greenland region accounted for a number of Atlantic storms, but these were generally too far east to affect any of the Atlantic Provinces.

November mean temperatures were generally not far from normal in the Province of British Columbia. Deficiencies of one degree were reported from Vancouver Island and the Okanagan Valley while in most other parts of the province there were excesses of one degree. The chief exception was in the extreme northeast corner of British Columbia, where Fort Nelson reported a deficiency of five degrees and the range was generally from three to five degrees below normal.

Along the British Columbia coast most of the November rain fell between the 7th and the 24th while inland there were scattered snow showers on the same occasions. A noteworthy feature of the month's weather was a gale on the 19th at Prince George, during which gusts of 75 miles per hour were experienced and a thunderstorm was reported, the latter a rare event in this part of the province. For November as a whole, precipitation was above normal in the southern half of Vancouver Island and in the Kootenay and Okanagan valleys. Herbert Inlet about midway down the west side of Vancouver Island reported the highest rainfall of any station in the country, 25.29 inches. In the interior of British Columbia, aside from excesses ranging to ninety per cent in the southern valleys, there were generally deficiencies which averaged about twenty-five per cent.

In the Provinces of Alberta and Saskatchewan the first week of November was mild. The warmest day was the 6th with temperatures reaching a maximum of seventy degrees at Calgary and seventy-two degrees at Gleichen, the latter being the highest temperature recorded in Canada during the month. In the following week a flow of cold air brought temperatures below zero for the first time. The weather was again mild in the third week, but a strong outbreak of Arctic Air flowed across the two provinces on the 24th bringing temperatures generally below zero. While the cold air was flowing over the remainder of the province, Estevan on the 25th enjoyed their warmest day of the month when the thermometer reached fifty-eight degrees. Mean temperatures for the month were generally one to three degrees below normal throughout the two provinces.

Snowfall during the month varied from three inches at Lethbridge to twelve inches at Banff, Lac La Biche, Cold Lake and Fort St. John. The total precipitation was generally below normal with deficiencies ranging to about seventy per cent except for local excesses at Rocky Mountain House, Brooks, Medicine Hat, Maple Creek and Moose Jaw.

In the Province of Manitoba temperatures were above normal during the first and third weeks of November while the second week was generally cold. A few stations reported record high daily maximum temperatures on the 25th. For the month as a whole temperatures were one to three degrees above normal in the southern half of the province and three to eight degrees below normal in the northern half, the latter deficiency being reported from Brochet.

A vigorous storm moved across the eastern prairies to north of Lake Winnipeg on the 21st accompanied by two to six inches of snow at stations north of the centre but gave only traces of snow to most of the grain areas of Manitoba. The storm was followed by gusty gale force winds with gusts reaching 77 miles per hour at Winnipeg. On the 28th a near blizzard resulted in southern Manitoba from a storm which developed in Utah and moved northeastward. Precipitation for the month as a whole was light throughout Manitoba, deficiencies ranging from ten to eighty per cent. In the northern section of the province, there were excesses of eighty to ninety per cent.

November was mild throughout Ontario. A series of intense high pressure areas moving eastward south of the lower Great Lakes provided a persistent southwesterly flow of mild air over the province. Although November was not the warmest on record in Ontario, it was certainly one of the warmest of recent memory. Temperatures averaged three to four degrees above normal in the southern part of the province, and five to eight degrees above normal in the northern and central sections, except for an exceptional one-degree deficiency at Trout Lake in the northwestern corner.

Because of the mild weather, snowfall amounts were well below average in the south and central region. In the north and northwest parts of the province snowfall was above average. The heaviest snowfall at any reporting station occurred at Armstrong in northwestern Ontario, which reported 31.4 inches. A number of other stations in northern Ontario received in excess of twenty-five inches of snow for the month. In southern Ontario precipitation for the month was mostly below normal, deficiencies ranging to fifty per cent in the southwestern corner and about thirty per cent elsewhere. A few stations along the Lake Huron shore reported excesses ranging to thirty per cent. In northern Ontario excesses and deficiencies in precipitation were about equally frequent, with the average for the area as a whole probably not far from normal.

A prevailing flow of warm air from the southwest kept temperatures above normal throughout the Province of Quebec during November. Mean temperatures for the month averaged five to seven degrees above normal in the Eastern Townships and the Ottawa Valley. On the Gaspe Peninsula there were excesses of three to five degrees, while in the central and northern sections of the province excesses were one to three degrees.

Because of the mild weather snowfall was much below normal, while total precipitation ranged on either side of normal. In the Eastern Townships there were generally deficiencies ranging to about thirty per cent while over the remainder of the province the distribution was very irregular ranging from a seventy per cent deficiency at Mont Louis on the Gaspe, to a ninety per cent excess at Nitchequon in the central interior. On the 14th and 15th of the month a large area of high pressure centred over the southern section of Quebec brought a stagnant air mass and general dense fog conditions especially along the St. Lawrence River valley, hampering all types of traffic.

In the Maritime Provinces November saw little change from the weather pattern that has persisted through the past several months. There were fewer than the usual numbers of low pressure areas and as a result precipitation was spotty. Rural areas in some parts of the Maritimes were still suffering from water shortages when the month came to an end. Halifax experienced the eighth consecutive month with subnormal precipitation and above normal sunshine. By the end of November Halifax had recorded 2,012 hours of sunshine to break the previous total for a year of 2,009 hours set in 1944 with December yet to come. November was generally mild with excesses of mean temperature ranging from zero to three degrees in Nova Scotia and Prince Edward Island, and two to four degrees in New Brunswick.

Precipitation was especially light in Nova Scotia with deficiencies ranging to sixty per cent while in Prince Edward Island there were deficiencies of thirty to fifty per cent. There were deficiencies ranging from forty to fifty per cent along the Bay of Fundy coast of New Brunswick but interior stations reported excesses of twenty to forty per cent.

November weather was generally fine on the Island of Newfoundland. A number of Atlantic storms moved northeastward during the latter half of the month but remained far enough out to sea so that Newfoundland weather was not unduly affected. The exceptions were two storms, one on the 19th and 20th, which brought one or two inches of snow to the Avalon Peninsula and another and heavier one on the 26th when St. John's Airport reported 13.8 inches of snow. There were excesses of precipitation for the month ranging to thirty to fifty per cent on the Avalon Peninsula, although St. John's itself reported near the normal amount. Throughout the remainder of the Island precipitation was generally below normal, deficiencies ranging to sixty per cent along the west coast, and about thirty per cent inland and on the east coast. Mean temperatures for the month were one to three degrees below normal on the Avalon Peninsula, and normal to two degrees above normal in the remaining parts of the Island.

Along the Labrador coast November was mild, excesses of mean temperature ranging from one to four degrees. Precipitation was twenty to thirty per cent below normal along the southern portions of the Labrador coast, while at Cape Harrison and Hopedale there were excesses averaging thirty per cent.

In the Yukon Territory two stations, Snag and Teslin, reported excesses of mean temperature of three degrees for the month. Over the remainder of the Territory there were deficiencies of one or two degrees. All stations in the mainland districts of the Northwest Territories experienced deficiencies of mean temperature as did those of the western part of the Arctic Archipelago. On Baffin Island there were excesses which ranged to five degrees, the latter at Clyde River, while on Ellesmere Island, Alert reported a one-degree deficiency which was balanced by a one-degree excess at Eureka.

In the District of Mackenzie, November precipitation was generally above normal, excesses ranging to twenty-five per cent. A few stations reported deficiencies of forty to fifty per cent. They were Aklavik, Coppermine and Fort Reliance. In the District of Keewatin, Ennadai Lake reported a thirty-per cent excess and other stations in the District experienced deficiencies averaging fifty per cent. In the eastern islands of the Arctic Archipelago, Holman Island reported almost three times the normal precipitation for the month, while the remaining stations experienced deficiencies ranging from thirty to ninety per cent. In the eastern section of the Archipelago there were deficiencies ranging to one hundred per cent but averaging about fifty per cent. Frobisher Bay and Resolute Island were exceptional both reporting excesses averaging fifty per cent.

NOVEMBER 1960
TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).
The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
